

Hands-On-Learning: Cybersecurity Policy & Governance for Business Success

Title: Draft a Policy Clause from a Regulatory Mandate

Learning Objectives

By the end of this activity, learners will be able to:

- Interpret a specific article from a major regulation (GDPR).
 - Use a generative AI tool to translate the legal requirement into a clear, enforceable policy statement.
 - Align the drafted policy statement with business priorities and an Information Security Management System (ISMS) documentation hierarchy.
-

Description

This activity simulates a core task for compliance and governance professionals. Learners will act as a compliance lead, using an AI assistant to bridge the gap between abstract legal mandates and practical, actionable corporate policy. This exercise provides a direct application of the foundational skill taught in Module 1, translating complex requirements into clear, and business-aligned policy clauses.

Structure of the Activity

Tool used

Google Gemini or ChatGPT

Scenario

You are a compliance lead at "FinSecure," a financial services company preparing for ISO 27001 certification and ensuring ongoing GDPR compliance. Management has identified "demonstrable compliance" as a key business priority. Your task is to interpret GDPR Article 5(1)(c) on 'data minimisation' and translate it into a clear, enforceable policy statement for FinSecure's ISMS

Objective

To use an AI assistant to draft a specific, enforceable policy clause from a legal principle, ensuring it reflects business goals and fits within a structured documentation hierarchy.

Instructions for learners

Preparation:

Open Google Gemini or ChatGPT.

Review GDPR Article 5(1)(c) : "personal data shall be adequate, relevant and limited to what is necessary in relation to the purposes for which they are processed ('data minimisation')".

Prompt Engineering:

Craft a detailed prompt for the AI. A high-quality prompt is essential for a useful output. Your prompt should include:

The AI's persona ("Act as a CISO for a financial services firm...").

The specific legal text (GDPR Art. 5(1)(c)).

The business context (financial services, ISO 27001 certification, business priority of "demonstrable compliance").

The desired output (a clear, enforceable policy statement, not a long explanation).

Iterate on the prompt at least once to refine the AI's output, as demonstrated in the course videos.

Analysis & Documentation:

Copy the final AI-generated policy statement.

Decide whether it functions best as a high-level **Policy**, a measurable **Standard**, or a detailed **Procedure** within the ISMS documentation hierarchy (the "governance pyramid") taught in the course.

Organize Information Following This Structure for Peer Review

- 1 Title Page:** Project title, your name, and date.
- 2 AI Prompt and Output:** Provide the final, refined prompt you used and the exact policy statement generated by the AI.
- 3 Justification and Hierarchy:** In a short paragraph, justify why you believe the generated statement is clear and enforceable. Then, state whether you classify it as a Policy, Standard, or Procedure, and explain your reasoning based on the "governance pyramid" concept.
- 4 Business Alignment:** Explain how this policy statement supports FinSecure's business priority of "demonstrable compliance."

Instructions for Documenting and Sharing the Project for Peer Review

1. Document the Project

Use word processing software to create your report.

Insert the diagram, map, screenshot, or image directly into your Word document, if available.

Ensure all sections of the project document structure are completed.

Proofread and edit your report for clarity and accuracy.

2. Share the Project

Save your report and presentation in PDF format.

Upload your documents to the “Peer Review” area in the course shell.

Provide a brief description of your project in the submission post.

3. Peer Review

Review the projects submitted by your peers.

Provide constructive feedback and comments on their work.

This activity gives learners a chance to apply the lesson by transforming abstract legal theory into a practical, auditable artifact that has a clear place within a corporate governance framework, using modern AI tools as a strategic accelerator.
